

# Managed Services Vehicle Installations

Arqiva offers a comprehensive vehicle installation and maintenance service as part of its Managed Services portfolio.

With every model change vehicles are becoming more complex. Together with the introduction of new legislation and the need to maintain passenger safety, whilst meeting the exacting operational requirements, installing communication and data systems in vehicles has become an ever more demanding task and calls for highly skilled and trained installation teams.

From the initial equipment layout and design to post installation support, Arqiva Engineers, supported by our vehicle installation centre of excellence, are able to provide everything from a one-off complex installation to a fully managed service for your entire vehicle fleet's communications and data systems.

## Features

- Fully compliant with current legislation
- Installations carried out to all recognised industry standards:
  - T1362, Code of Practice - Fire service vehicles
  - NAPFM Code of Practice - Police vehicles
  - BS EN 1789:2000 - Ambulances
- Documented installation and design process
- Vehicle installation consultancy service
- Regular quality audits

## Benefits

- Installations exceed prescribed standards with no compromise on vehicle safety
- Avoidance of Electromagnetic Compatibility (EMC) – related issues
- Complete records of agreed installation design
- Customer involvement throughout the design and installation process
- Dedicated installation teams based across the country
- Full post installation support with the risk of installation problems fully taken by Arqiva

## Technology that's powerful, reliable and secure

Arqiva's skilled installation engineers can install analogue radios, digital radios, Mobile Data Terminals (MDTs), Automatic Vehicle Location Systems (AVLS) and many other types of equipments into Police Vehicles, Ambulances, Fire Tenders, Special Incident Vehicles, Officers Cars, Motorcycles, Royal Protection Vehicles, Commercial Vehicles and Small Boats.

Arqiva can also design and build your mobile command centres, as well as your communication systems for mobile disaster recovery.

Arqiva can even provide a full commissioning centre for your vehicle fleet with our engineers installing light bars, full communications equipment and decals, as well as managing all aspects of vehicle delivery, installed equipment repair, maintenance and logistics for a monthly per vehicle service charge. This leaves you to concentrate on operational issues whilst Arqiva takes care of your communications.

Arqiva's vehicle installation centre of excellence is an industry leading body which recently led a joint team of industry and government experts, on behalf of the Federation of Communications Services, to review the British Standard MPT1362 against recent European legislation and quality standards. It is dedicated to excellence in all aspects of equipment installation of all types into vehicles and to maintaining the high standards of both safety and quality throughout the industry.
